SUMMARY

Backend engineer with 5+ years of experience, including four years at Moralis building blockchain data APIs and real-time indexing pipelines for Solana and EVM chains. Experienced in TypeScript and NestJS with PostgreSQL, DynamoDB, ClickHouse and event streaming, and in Rust for performance-critical services. Comfortable owning services from design through production, with AI-assisted development as part of the daily workflow.

EXPERIENCE

Software Developer · Moralis Web3 · Remote — Sep 2022 – Present

Backend engineer on the team behind Moralis' Web3 data APIs, which serve wallet, token and price data for Solana and EVM chains.

- **Designed a Solana swap-parsing framework** and wrote decoders for 9 pool types across Orca, Raydium and Meteora, plus the pair, swap and candlestick APIs built on it. Later recovered 47% of missed Raydium AMM v4 swaps (~236k records a day).
- Onboarded 6 EVM chains and 12+ DEX protocols, including Uniswap v4, PancakeSwap Infinity and Algebra, and built an OHLCV candle service that rolls 10-minute candles up to 8 timeframes.
- Cut a Rust data-processing service's memory from 29 GB to 4.7 GB (−84%) by switching to jemalloc, and made its Solana decoding 3.8x faster.
- Redesigned a ClickHouse price lookup that was timing out under load, reaching zero timeouts, ~230x faster p99 and half the memory, and rolled it out with no downtime.
- Reduced API response times for large Solana wallets from 7–8 seconds to about 2.5 seconds by parallelising metadata lookups, ending timeouts on the biggest wallets.
- Migrated wallet, transfer and swap APIs to ClickHouse across 7 EVM chains, comparing live shadow traffic against production before each cutover.
- Benchmarked Elasticsearch against ClickHouse for a 1M-token search store. Elasticsearch read 3–6x faster and wrote ~2.7x faster, and replaced an overloaded Postgres setup.
- Traced customer-facing 500 errors to dropped database connections and added retries behind 11 API endpoints.
- Built an AI agent with the Claude Agent SDK that detects API latency regressions and runs read-only root-cause diagnosis. Use Claude Code daily for design, review and debugging.
- Ran services on Kubernetes with Helm, with monitoring in Grafana and Prometheus and load testing with k6.

System Engineer · Tata Consultancy Services · Delhi — Jan 2021 – Aug 2022

- Developed and maintained Oracle Siebel CRM workflows for SBI Card's credit card customer support platform.

- Started as an Assistant System Engineer (apprentice) in Jan 2021 and was promoted to System Engineer in Dec 2021.

Data Entry Associate · Awign · Remote — Jan 2019 – Jan 2021

- Handled remote data transcription for Zomato.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Rust, SQL, C, Java
Backend	Node.js, NestJS, REST, gRPC/Protobuf, Kafka-compatible streaming, BullMQ, Redis
Databases	PostgreSQL, DynamoDB, MongoDB, ClickHouse, Elasticsearch, OpenSearch, MySQL
Cloud & infra	AWS, Docker, Kubernetes, Helm, GitLab CI, k6
Observability	Grafana, Prometheus, Datadog, Slack alerting
Web3	Solana and EVM chains, ethers.js, @solana/web3.js, smart-contract event decoding, DEX protocols
AI	Claude Code, Claude Agent SDK, Anthropic and OpenAI APIs
Other	React, Next.js, Oracle Siebel CRM

EDUCATION

B.Tech, Computer Science & Engineering — 2016 – 2020 · CGPA 8.46/10
Government College of Engineering Kannur

Class 12 (CBSE) — 2016 · 85.4%
St. Francis School Indirapuram

Class 10 (CBSE) — 2014 · CGPA 8.8/10
St. Francis School Indirapuram

ACADEMIC PROJECTS

- **Fake News Detection** (final year): news classifier built with LightGBM and WordBatch.
- **Online Bookstore**: full-stack e-commerce app built with Node.js and MySQL.
- **Spam Filter**: text classifier built with Python and NLTK.

CERTIFICATIONS & ACHIEVEMENTS

- LinkedIn Skill Assessments: Python, React.js
- NPTEL Intro to Machine Learning (IIT Kharagpur), 80% · 2019
- Android app development training and certification · 2018
- 1st place, ROBOCEK robotics event, GCE Kannur · 2016
